

Almana

AI-Powered Mobile Health Consultant

Industry	Digital Health / MedTech
AI Stack	LLM / RAG / Agents / Predictive AI
Platform	iOS Mobile App (App Store)
Services	AI Dev + Full-Stack Mobile Build
Year	2025 - 2026

What is Almana?

Almana (■■■■■■■) is a next-generation AI-powered mobile health consultant that puts a personal medical expert in every patient's pocket. Combining large language models, retrieval-augmented generation, and multi-agent AI workflows, Almana compresses the traditional patient journey — from symptom check to specialist consultation — into a seamless mobile experience available 24/7.

The app delivers an intelligent AI doctor agent, real doctor booking, full patient history management, hyper-personalised health recommendations, and an AI co-pilot that assists both patients and physicians — all built natively for iOS.

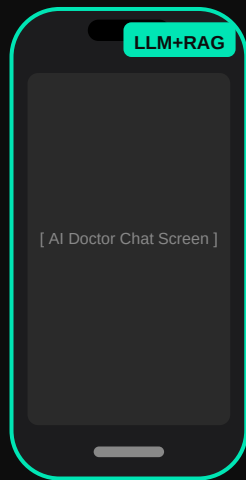

THE CHALLENGE	THE SOLUTION
Access to quality medical advice is constrained by cost, geography, and long waiting times. Patients either self-diagnose using unreliable sources or delay critical consultations. Doctors, in turn, spend significant time on routine queries and lack AI-augmented decision support.	Almana places an AI doctor agent at the patient's fingertips — available around the clock. When human expertise is needed, seamless real doctor booking bridges the gap. AI analysis of the patient's full history ensures every recommendation and consultation is personalised and clinically grounded.

AI FEATURES AT A GLANCE

01	AI Doctor Agent	24/7 conversational AI physician powered by LLM + medical RAG
02	Smart Doctor Booking	AI-matched real doctor appointments with intelligent scheduling
03	Patient Health History	Complete health record management with AI-driven insights
04	AI Health Recommendations	Hyper-personalised care plans and preventive guidance
05	AI Data Consultation	Deep AI analysis of historical patient data for smarter diagnosis
06	AI Doctor Co-Pilot	Real-time AI assistance and decision support for physicians

AI Doctor Agent

Your personal physician, always available — no waiting room required.

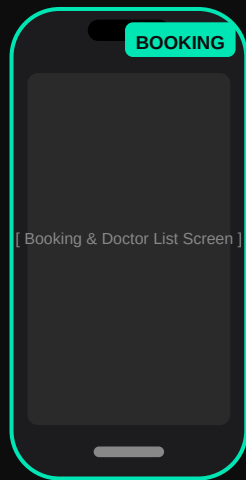

HOW IT WORKS

The AI Doctor Agent is a fully conversational, LLM-powered medical assistant embedded in the app. Patients describe their symptoms in plain language and receive structured, clinically-grounded assessments, triage guidance, and actionable next steps — backed by a RAG pipeline trained on medical literature and the patient's own history.

- Natural-language symptom checker and health Q&A;
- Medical knowledge base via RAG (clinical guidelines, drug info)
- Triage classification: urgent, routine, or self-care
- Contextual follow-up questions to narrow differential diagnosis
- Escalation triggers for emergency conditions
- Persistent conversation memory across sessions
- Multilingual support (Arabic / English)

Smart Doctor Booking

Human expertise, one tap away — matched by AI.

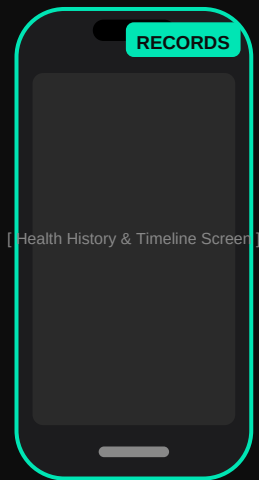

HOW IT WORKS

When the AI determines that a human physician is required, or when the patient chooses to consult a real doctor, the booking module takes over. AI matches the patient to the most suitable available specialist based on their stated concern, location, language preference, and historical data. Appointments are confirmed in seconds.

- AI-powered specialist matching based on condition and history
- Real-time availability calendar with instant confirmation
- In-app video, audio, and chat consultation modes
- Automated pre-consultation summary sent to the doctor
- Smart reminders and follow-up scheduling
- Post-consultation feedback and rating loop
- Insurance and payment integration

Patient Health History

Every health event, every data point — intelligently organised.

[Health History & Timeline Screen]

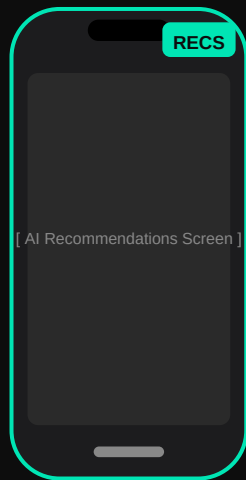

HOW IT WORKS

Almana maintains a comprehensive, structured health profile for every user. Medical records, lab results, prescription history, vaccination logs, and consultation notes are all stored, indexed, and made instantly accessible to the AI and to authorised physicians — eliminating the need to repeat history at every visit.

- Unified health timeline: consultations, diagnoses, prescriptions
- Lab result uploads with AI-interpreted summaries
- Medication tracker with dosage reminders and interaction alerts
- Vaccination and preventive care schedule
- Chronic condition monitoring with trend visualisation
- Secure sharing with doctors via encrypted access tokens
- HIPAA/GDPR-compliant data storage

AI Health Recommendations

Preventive care that knows you — before you know you need it.

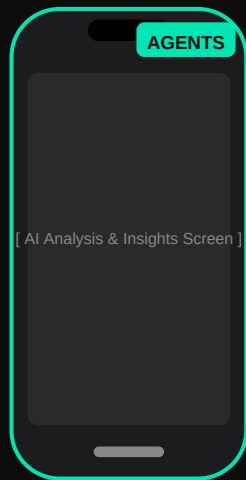

HOW IT WORKS

The AI Recommendations engine analyses each user's health profile, lifestyle indicators, lab trends, and anonymised population health data to generate hyper-personalised preventive care plans, dietary guidance, medication reminders, and wellness goals — surfaced proactively through the app.

- Personalised preventive screening reminders (age, risk, history)
- AI-generated nutrition and lifestyle recommendations
- Chronic disease risk scoring with early-warning alerts
- Medication adherence nudges and refill reminders
- Dynamic wellness goals updated as health data evolves
- Mental health check-ins and stress management tips
- Recommendations benchmarked against clinical guidelines

AI Data Consultation

Smarter diagnosis through the lens of your complete health story.

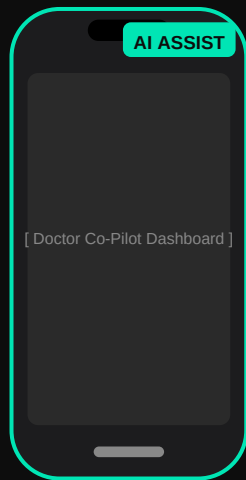

HOW IT WORKS

Unlike a standard chatbot, Almana's AI Consultation engine grounds every interaction in the patient's full longitudinal health record. When a user reports a new symptom, the AI cross-references it against prior diagnoses, medications, lab results, and consultation notes — enabling pattern recognition that mirrors the reasoning of an experienced clinician.

- Cross-referencing new symptoms against historical diagnoses
- Automated detection of recurring conditions and relapse patterns
- Lab trend analysis with AI-generated clinical interpretation
- Medication–symptom correlation analysis
- Differential diagnosis ranked by patient-specific probability
- AI-written consultation summary for patient and doctor
- Continuous learning from new data inputs

AI Doctor Co-Pilot

Augmenting physicians with real-time AI intelligence at the point of care.

HOW IT WORKS

Almana's AI does not stop at the patient. When a real doctor conducts a consultation through the platform, the AI Co-Pilot operates alongside — surfacing the patient's full AI-analysed history, flagging risk factors, suggesting evidence-based treatment options, and auto-drafting clinical notes. Doctors deliver better care in less time.

- Pre-consultation AI briefing: history summary, risk flags, AI assessment
- Real-time differential diagnosis suggestions during consultation
- Evidence-based treatment protocol recommendations (RAG)
- Drug interaction and contraindication alerts
- Auto-generated SOAP note drafts for physician review
- Post-consultation care plan generation
- Analytics dashboard: patient outcomes and AI accuracy metrics

TECHNOLOGY

Tech Stack & Architecture

Almana is built on a modern, HIPAA-aware mobile-first architecture. AI modules operate as independent microservices, enabling granular scaling. The mobile frontend communicates with a secure AI backend that orchestrates multi-agent workflows, RAG pipelines, and real-time physician notifications.

Mobile Frontend	AI / LLM
React Native (Expo), TypeScript, NativeWind, Reanimated 3	OpenAI GPT-4o, Anthropic Claude 3.5, LangChain Agents
Medical RAG	Agent Framework
Pinecone Vector DB, LlamaIndex, Clinical Guidelines Embeddings	LangGraph Multi-Agent, Tool-Calling, Memory Persistence
Realtime	Backend
WebSockets, Supabase Realtime (live consultation, notifications)	Node.js / FastAPI, PostgreSQL, Redis, BullMQ
Health Data	Auth & Security
HL7 FHIR-compatible records, Encrypted health data vault	Clerk Auth, End-to-end encryption, HIPAA/GDPR compliant
Infra & CI/CD	Payments
Vercel, AWS Lambda, S3, GitHub Actions, TestFlight / App Store	Stripe, Apple Pay, Insurance verification API

IMPACT & METRICS

24/7	AI Medical Availability
< 2s	AI Response Time
6	Core AI Features
100%	Patient Data Encrypted

READY TO BUILD YOUR AI-Powered Health App?

Almana proves that AI can transform healthcare — making expert medical guidance accessible, personalised, and immediate. At Asad Rahman AI Agency, we engineer intelligent mobile health products that improve patient outcomes, reduce clinical friction, and scale without limits.

AI Doctor Agents	Medical RAG	Smart Booking	Full-Stack Mobile
LLM-powered health assistants for patients and physicians	Clinical knowledge bases, lab interpretation, diagnosis support	AI-matched real doctor appointments with auto-briefings	React Native apps with AI-native backend and health data vaults

Let's build your AI-powered health platform
