law.co

AI-Powered Legal Intelligence Platform

PORTFOLIO CASE STUDY

Industry	AI Stack	Services	Year
Legal Technology	LLM / RAG / Agents	AI Dev + Automation	2024 - 2025

PROJECT OVERVIEW

What is law.co?

law.co is a next-generation AI-powered legal intelligence platform that reimagines how legal professionals and everyday people interact with the law. By combining large language models (LLMs), retrieval-augmented generation (RAG), and intelligent multi-agent workflows, law.co compresses hours of legal work into seconds.

The platform delivers four deeply integrated AI capabilities wrapped in a sleek, modern dark interface: a Perplexity-style legal research engine, an AI document drafter, an expert AI legal counsel, and a real-time AI-mediated dispute resolution room.

THE CHALLENGE

Legal services are inaccessible to most people due to high cost, complexity, and slow turnaround times. Drafting contracts, researching case law, or getting expert legal opinions typically requires expensive attorneys and days of waiting.

OUR SOLUTION

law.co democratizes legal expertise by embedding AI at every touchpoint. From instant web-sourced research to real-time AI mediation sessions, the platform makes expert-level legal assistance available 24/7.

FEATURES AT A GLANCE

01

AI Legal Search

Perplexity-style research with live web results and sourced citations

02

AI Drafter

Upload, generate, and refine legal documents with AI

03

AI Counsel

Expert AI attorney giving instant jurisdiction-aware legal advice

04

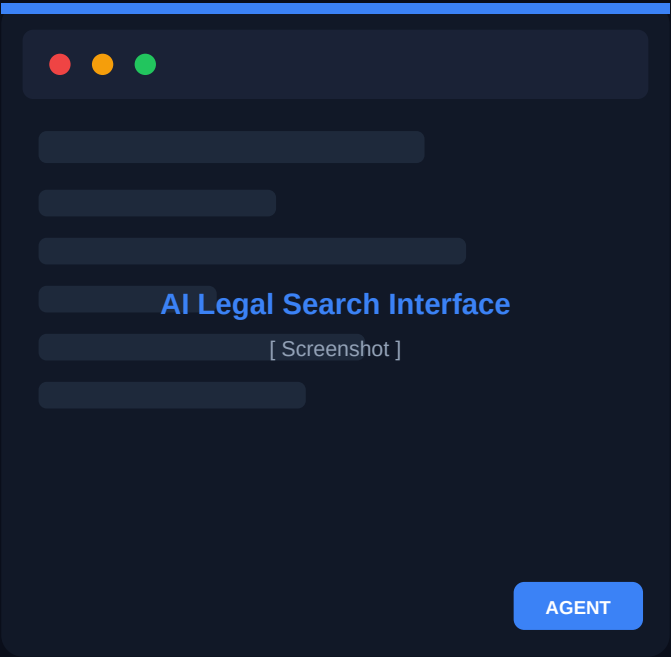

AI Mediator

Real-time AI-guided dispute resolution between two parties

FEATURE 01

AI Legal Search

Search the law like you search the web -- but smarter.

HOW IT WORKS

The AI Search feature acts as an intelligent research agent that queries the live web, aggregates authoritative legal sources, and presents results in a Perplexity-style interface complete with sourced citations, summaries, and follow-up suggestions. Users type a legal question in plain English and receive a structured, cited answer in seconds.

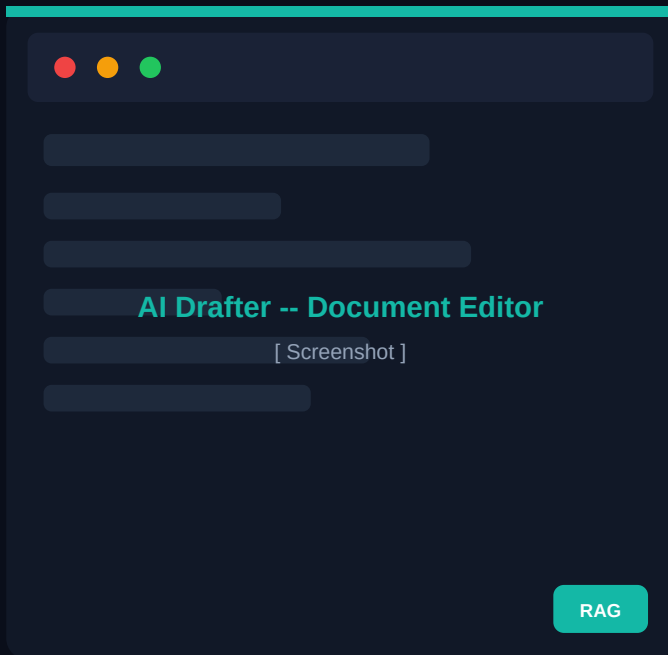

- Live web search with URL source attribution
- LLM-synthesised answer with inline citations
- Follow-up question suggestions
- Jurisdiction-aware filtering
- Perplexity-style cards with source previews

Powered by a multi-step AI agent that decomposes the query, dispatches parallel web searches, re-ranks results by relevance, and synthesises a coherent legal answer -- all in under 3 seconds.

FEATURE 02

AI Drafter

From blank page to polished legal document -- instantly.

HOW IT WORKS

The AI Drafter provides three powerful pathways for legal document creation. Upload an existing draft and instruct the AI to modify specific clauses. Prompt the AI to generate a document from scratch. Or search a curated resource library of pre-built templates and refine them interactively.

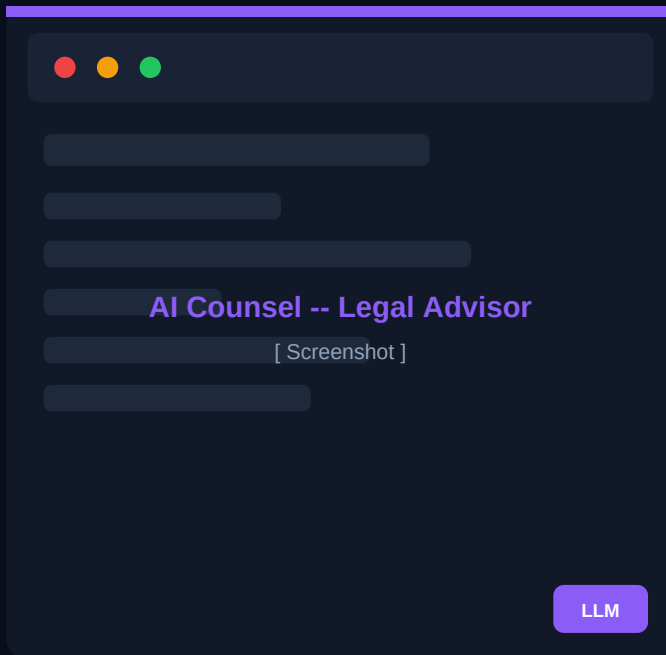

- Upload draft -- AI edits specific sections on command
- Prompt-to-document generation from scratch
- Searchable RAG-powered template library
- Inline AI suggestions with accept/reject controls
- Export to PDF / DOCX with version history

The resource search is powered by a RAG pipeline that embeds thousands of legal templates into a vector database, enabling semantic retrieval of the most relevant starting point for any document type.

FEATURE 03

AI Counsel

Your personal expert lawyer, available 24/7.

HOW IT WORKS

AI Counsel positions an advanced LLM as a fully qualified expert legal advisor. Users present their legal situation in plain language and receive professional-grade advice covering applicable laws, risks, recommended courses of action, and potential outcomes -- all grounded in up-to-date legal knowledge via RAG.

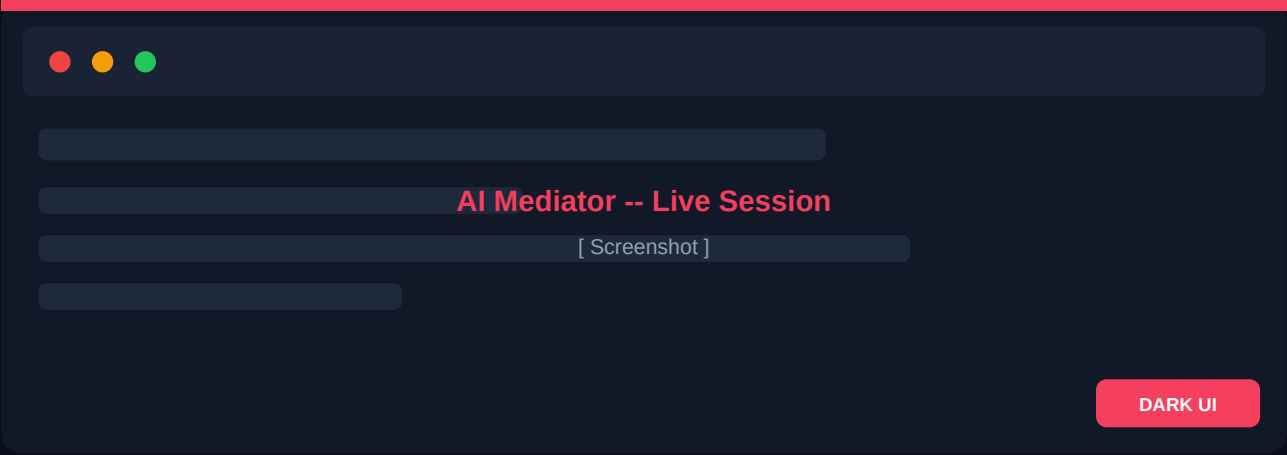

- Expert-level legal advice in plain English
- Jurisdiction and case-type awareness
- Risk analysis and recommended next steps
- Grounded in live legal databases via RAG
- Conversational follow-up clarification UI

The counsel engine uses a system-prompt architecture that instructs the model to reason like a senior attorney, always citing applicable statutes and precedents while flagging when professional human review is advisable.

FEATURE 04

AI Mediator

Two parties. One AI. One resolution.

The AI Mediator transforms the dispute resolution process by placing an intelligent neutral party at the centre of a live conversation between two conflicting parties. Both participants join a shared chat room where the AI continuously monitors the dialogue, detects tension, guides statements, and steers the conversation toward a mutually beneficial resolution -- without bias.

01 Parties Join Each party enters the mediator session independently via a secure link.	02 AI Monitors The LLM reads every message, analyses sentiment, and identifies conflict points.	03 Guided Resolution The AI injects neutral, constructive prompts to bridge differences and propose agreements.

TECHNOLOGY

Tech Stack & Architecture

law.co is engineered on a modern, scalable AI stack designed to deliver low-latency responses, high-accuracy legal intelligence, and seamless user experience across all four product pillars.

Frontend	Next.js 14, Tailwind CSS, ShadCN UI, Framer Motion
AI / LLM	OpenAI GPT-4o, Anthropic Claude 3.5, LangChain
RAG Pipeline	Pinecone Vector DB, LlamaIndex, Embedding Models
Web Search	Tavily Search API, Serper, Custom Crawlers
Agents	LangGraph Multi-Agent Framework, Tool-Calling Agents
Real-time	WebSockets, Supabase Realtime
Backend	Node.js / FastAPI, PostgreSQL, Redis
Infra & Auth	Clerk, Vercel, AWS Lambda, GitHub Actions CI/CD

IMPACT & METRICS

< 3s Avg. AI Response Time	4 Core AI Features	100% Serverless	24/7 AI Availability

READY TO BUILD YOUR

AI-Powered Product?

This project demonstrates what is possible when cutting-edge AI meets a domain ripe for disruption. At Asad Rahman AI Agency, we deliver end-to-end intelligent products -- from concept to deployment.

Custom AI Agents	RAG & LLM Ops	Workflow Automation	Full-Stack AI Apps
Multi-agent systems tailored to your workflows	Knowledge bases, vector search, LLM pipelines	n8n, Make.com, Claude Code integrations	Next.js frontends with AI-native backends

Let's build something extraordinary together
